

VALUELINE SYSTEMS AND SOLUTIONS CORP.

ABOUT VALUELINE

Valueline Systems & Solutions Corporation is the leading technology solutions provider servicing some of the top corporations in the Philippines. The company started as an IBM reseller for PCs, servers, printers, and peripherals. In the tens years of operation, Valueline has provided its customers with quality products and services, reliable and effective after sales service and warranty support, updated product information and access to new development in technology. Today, Valueline's technological expertise include various industry-leading solutions, corporate ICT services as well as systems integration. Valueline is your one stop Information and Communication Technology solutions provider.

We offer a wide spectrum of hardware from PC printers, peripherals to enterprise servers and storage products. We are an inclusive partner of world class software solutions in the areas of human resources management, database, back-up solutions, security and patch management solutions. Other than our traditional services of technical support for hardware and software, we are now able to provide our clients as new host of high end services such as network infrastructure design and set up, structured cabling, facilities management , disaster recovery, managed security and business continuity services.

Valueline prides itself in its commitment to provide and deliver cutting edge, cost effective technologies that work and help clients achieve their business goals. It is this commitment of reliability and excellent customer service that has earned us the trust and recurring business we have from all our satisfied clients.

VALUELINE SUITES OF PRODUCTS

The Valueline Suites of Products (VSuites) is designed for companies that have no or small IT unit. VSUITE removes the need for your company to set up an elaborate IT infrastructure and the manpower to support it. VSuites makes use of the power of the internet. You can access the important reports anywhere and anytime with just a fraction of the cost of an in-house IT infrastructure and organization.

Here is a list of the VSUITE Products:

1. VCHECKOUT - Point of Sales Technology Solution
2. VBROADCAST - Digital Signage Solution
3. VACADEME - Online Enrollment System Solution
4. VLIVE - Teleconferencing System Solution

VCHECKOUT: The Point of Sale system provides automation in creating sales and inventory report on a periodic basis. This is the primary tool of retail giants like SM, Ayala Malls, Robinsons, and Rustans, but the prices to purchase are exorbitant.

At his price level, many small and medium scale enterprises are not able to afford. VCheckout is used both as a sales and inventory system with additional modules for Loyalty, Promos, and interfaces to your Accounting and Human Resource Systems. VCheckout has a central management module that sees all the VCheckout touch points. This central system has real time information that can make a difference in a business. Critical information like inventory movements, fast moving products, promo effectiveness, personnel attendance, cash position is available.

VACADEME: Valueline Online Enrollment System is a product designed to make it convenient and easy for students to enroll in a school. Gone are the days where students have to queue for several days to complete an enrollment. VAcademe provides an enrollment, grades query and payment service. The students enroll in the shortest possible time in the comfort of their homes or at the neighborhood internet cafe. Meanwhile, the school does not need to open the gates and manage queues. The system organizes the room and teacher loads, all payments are deposited to a bank account with corresponding collection report. And all these can be accomplished with no cost to the school.

VBROADCAST: One of the latest tools in marketing is digital media. VBROADCAST is a digital signage system. It reaches the target market and creates recall. However, the distribution tool is the key differentiator of this product. It uses the internet to send and play videos and does so at any time the customer wishes to. While it takes 3 to 5 days for a similar product to distribute videos nationwide, it takes VBroadcast less than an hour to complete the process.

VLIVE: Every business owner who has branches around the country understands the pain of having to gather every single manager to meet in one location and spend for their transportation and housing cost. With VLIVE, your branch managers need not leave comforts of their branches. Meetings and other seminars (i.e. webinars) can now be conducted online and in real time. This is part of Valueline's promise to help businesses focus on what is more important -- running the business.

PARTNERSHIP ADVANTAGE: Managed Services

The practice of transferring day-to-day related management responsibility as a strategic method for improved effective and efficient operations. Why would companies give up management control of certain parts of their business? Peace of mind and predictable cost! This service will be offered in different price structures. Most common is the monthly service fee but it can also be time and material, per desktop, server or network device. Managed services are often looked at as a way for small and medium sized businesses to outsource their IT needs at a lower cost than building an in-house IT support department

KEY BUSINESS BENEFITS

- Business owners have peace of mind. No need to worry about how your business is doing. Reports can be checked online in real time.
- Single point of contact for all issues.
- Single supplier instead of multiple vendors
- Known costs for management & fixed price contracts
- Avoid costs of building own management & reporting systems
- Lower Total Cost Ownership (TCO) for client

WHAT WE CAN DO FOR YOU

- **Managed Digital Broadcast:** Using VBroadcast as the vehicle and your website as the initiation point to access your customers.
- **Managed Videoconferencing:** Organizations who have people in distant places may be able to meet in real time using VLive over the internet. This service could be provided 24/7 for organizations or even for small groups of friends on demand.

Payment can be made online through BDO or mobile through Smart Money or GCash.

- **Application Management:** The Valueline Software Development Department has the capability to create customized applications. This service caters to those companies who have specialized automation needs for their business like Accounting System with Sales and Marketing modules, Salon System with sachet inventory, Water Station System with CRM, etc. You name it, we can make it!
- **Security Management:** While this service will depend on the security policy of a company, we have the capability to provide the following:
 - Vulnerability Scanning
 - Incident Management
 - Patch Management
 - Anti Virus & Spam Management
 - Secure Messaging and Email
 - Network and End Point Security
- **Network Management:** This is not a one-size-fits-all service, and this will involve a number of stages – consultation, design, engineering, and implementation
